

**Attention: All OWNERS & RESIDENTS!**

**Pre-construction Inspection February 6-9, 2012**

**9:00 am – 5:00 pm**

**All suites must be inspected to identify potential obstacles or impediments to the re-glazing program. Once identified, the problems can be addressed before construction begins.**

Please inform the **concierge (604-893-7400)** immediately of any conflicts with this schedule so that arrangements can be made to prevent delays in the schedule.

The staging platform being built to support our re-glazing program will surround the building and is being designed to withstand winds up to 100 km/hr. In order to meet the design requirements, the platform has to be anchored to the building structure.

**As part of the pre-construction planning, ALL suites have to be inspected to identify any obstacles that may exist that obstruct access to the anchor points.**

The inspection is also to identify potential problems with the transport of the glass panels between the elevator and the staging platform and to double check glazing sizes.

The inspectors will be on the look-out to identify any issues that could potentially cause a delay in the schedule if not addressed before construction begins.

**It is anticipated that the inspection will take about three or four days and needs to be completed as soon as possible.**

**The planned schedule is February 6-9, 2012.**

ONE WALL CENTRE – NORTH
